

```
from math import sin
```

<método>(<parâmetro>)

The diagram illustrates the relationship between a Python import statement and a generic method call. At the top, the text 'from math import sin' is shown. Below it, a generic call '<método>(<parâmetro>)' is displayed. A curved arrow originates from the '<parâmetro>' part of the generic call and points to the word 'sin' inside a cloud-like shape. The word 'sin' is also the name of the module imported in the statement above.

sin
